Summary

Final Year Bachelor of Science (Honours) in Information Technology undergraduate at University of Moratuwa with hands-on industry experience at IFINITY GLOBAL as a Full Stack Software Engineer Intern. Experienced in developing scalable web and mobile applications using modern technologies and software engineering practices. Proficient in Java, C, Python, React.js, React Native, Node.js, Spring Boot, Docker, MongoDB, MySQL, and Oracle Database. Passionate about full-stack development, problem-solving, and building efficient software solutions. A motivated and adaptable team player with strong communication, leadership, and analytical skills, eager to contribute to innovative software engineering projects while continuously improving technical expertise.

Professional Experience

04/2025 – 01/2026 colombo	Ifinity Global <i>Intern Software Engineer(Fullstack)</i> Worked as a Full Stack Software Engineer Intern at IIFINITY GLOBAL, contributing to the development of a banking workflow engine using React.js, Tailwind CSS, Node.js, Spring Boot, and Oracle Database. Involved in frontend and backend development, performance testing using Apache JMeter, and manual testing to ensure system reliability, efficiency, and high application quality.
2023 – 2026	Frelancer Freelance Full Stack Developer experienced in designing and developing modern web and mobile applications with scalable frontend and backend solutions. Skilled in creating user-friendly software systems, UI/UX designs, and efficient digital solutions tailored to client requirements.

Education

2022 – present	Bachelor of Science Honors in Information Technology(Undergraduate) <i>Faculty of Information Technology- University of Moratuwa</i>
2018	G.C.E Advanced Level <i>Anuradhapura Central College</i>

Skills

Frontend Reactjs, Tailwind CSS	Backend Spring Boot, Node.js(Express.js)
Databases Oracle Database, MongoDB, MySQL	Programming Languages Java, Python, C
UI/UX Design Figma	Tools Docker, Git, REST APIs, Postman,IntelliJ , VSCode

Projects

- Sports Management System (Level 2 Software Project)**
second year software project(Bistech Global)
- Collaborated within a 5-member development team to build and enhance the Sport Management System.
 - Developed event organizer profile management features to efficiently handle sports event administration tasks.

- Designed and implemented a dynamic point table system for real-time score and performance tracking.
- Built functionalities to retrieve, manage, and display sports events, improving user experience and operational workflow.
- Implemented coach and player assignment systems for teams using ReactJS, NodeJS/ExpressJS, and MongoDB as a Full Stack Developer under the mentorship of Bistec Global.

Sensory Journey Web Application (HackX)

- Led the development of the Sensory Journey web application for the HackX 9.0 Competition, focusing on supporting children with autism through interactive sensory activities.
- Designed and implemented a personalized activity system that adapts to each child’s needs and preferences for a better learning experience.
- Developed core features using ReactJS, NodeJS/ExpressJS, and MongoDB to ensure a smooth and scalable full-stack architecture.
- Created intuitive UI/UX designs to make the platform child-friendly, accessible, and easy for parents and caregivers to use.
- Built a system that enables engaging at-home sensory development activities, aiming to improve learning, comfort, and emotional well-being for children.

Online Shopping System

- Collaborated in a 9-member team to develop an online shopping system with a scalable microservices architecture.
- Designed and implemented backend services using NodeJS/ExpressJS and PostgreSQL as a Backend Developer.
- Utilized Docker for containerization to ensure consistent deployment and improved system scalability.
- Implemented unit and integration testing using Jest to enhance code reliability and system stability.

Online Vehicle Booking Mobile Application

- Developed an individual mobile application for an online vehicle booking system using React Native, enabling users to book and manage vehicles seamlessly.
- Designed and implemented backend services using NodeJS and PostgreSQL to handle booking operations and data management efficiently.
- Built a responsive and user-friendly interface using Tailwind CSS, focusing on smooth navigation and enhanced user experience.
- Utilized version control systems to manage code changes effectively and ensure smooth development workflow.

AI-Based Skin-Tone Adaptive Framework for Severity-Aware Dermatological Disease Classification (Research Project)

- Developed AI models for acne detection and severity classification using Python, TensorFlow/Keras, and OpenCV.
- Applied image preprocessing and computer vision techniques to improve facial skin image analysis and model accuracy.
- Built and evaluated machine learning pipelines for reliable acne severity prediction across diverse skin tones.
- Contributed to a dermatological disease classification system focused on fairness, accuracy, and scalable AI-based skin analysis.

Volunteering Experience	
2025 – 2026	Faculty of Informationtechnology,University of Moraruwa <i>Level 4 Batch Representative for the batch 21</i>
2025 – 2026	Fit Moments <i>Member of HR pillar</i>
